

1. Introduction

This project is about creating a website for the help of the poors of our country. Website aims in distributing the extra remaining food from different hotels, restaurants, etc to be distributed among the people with the support of NGO's and Voulenteers. The information for picking up the food resources would be provided by the hotels, restaurants, etc on the daily basis via our website. This website could result in deduction in wastage of the food resouces and not only this but it would help those in need of it and possibly not much people have to sleep empthy stomach.

2. Expected List of Features

- a) It would work in a particular region where all the hotels, restaurants, etc are connected to the platform for the goods of the people.
 - b) Every one in this project working are registered for different categories the one who would be providing the food and the one who would be distributing the provided food.
 - c) The amount of food to be picked up would be provided by the hotels, restaurants, etc on daily basis on the website and these details would be further shared with the NGO's and the vounteers connected to us in this project.
 - d) The track of the food would be maintained of each day, week and month that how much food was distributed, which hotels, restaurants, provided what amount of food and what type of food resource.
 - e) The individual distributing the food would be provided with the selective regions among which he/she can choose the place where they are capable of ditributing.
- And many more features.

3. UI Design and Prototype
